

## Block 5 — A Second Cockpit: Antigravity

### Goal

Open the same project in Google Antigravity (a visual, browser-based agentic IDE), connect the same MCP server you set up in Block 4, and add a chart to the report — all by telling the agent what you want in plain English. This shows that MCP is not tied to the terminal; the tools move with you.

### Type this

1. Open [Antigravity](#) in your browser and sign in with your Google account (free tier, no payment needed).
2. Click **Open project** and navigate to this project's folder on your computer.
3. In Antigravity's settings panel, find **MCP servers** and add the filesystem server. If you are not sure of the JSON format, copy the contents of `fallbacks/b5-antigravity-mcp-config.json` into the configuration box.
4. Once the project is open and the MCP server shows as connected, paste this into the Antigravity agent prompt: `Open data/orders.csv` and add a bar chart of monthly revenue to the report.
5. Approve each action the agent proposes, just as you did in Claude Code.

### You should see

- Antigravity's visual IDE with your project files visible in the sidebar.
- The MCP server listed as active in the tools panel.
- The agent reading `data/orders.csv`, computing monthly revenue, and adding a bar chart (PNG or inline plot) alongside the existing report output.
- December (2024-12) standing out as the tallest bar — confirming the same answer you found in Block 2.

### If it looks wrong

- **Free-tier quota exhausted:** Antigravity's free tier runs on a weekly quota. If you see a "quota exceeded" or "upgrade required" message, switch to the facilitator's live demo or the fallback recording. You have not lost your work — come back next week and the quota resets.
- **MCP server not connecting:** double-check that you pasted the config from `fallbacks/b5-antigravity-mcp-config.json` exactly. The `."` path in the config must match the folder Antigravity has open.
- **Chart does not appear:** ask the agent `Show me the chart you generated.` — it may have saved it as a file rather than displaying it inline.
